Unrest in Science: Chronicles of a Cosmological Revolution

Cosmology, the study of how the Universe began and how its structures formed and evolved, has always been at the frontier of human knowledge; seeding religions, cementing civilizations and challenging scientific thought. It is thus remarkable that a compelling, empirically verifiable account of the Universe's history has only emerged during the past few decades.

I will briefly review the observations and theories that have shaped our present cosmological paradigm, the enigmas they have uncovered, and what they tell us about the fate and origin of the Universe.

Dr. Julio Navarro
Dept. of Physics & Astronomy
University of Victoria

Tuesday, Jan. 8th, 6:30 pm
Hermann's Jazz Club
753 View St.

**Café Scientifique is a monthly public discussion series
